Population Factors Using 1990 Census Data

=====

Approximate Population and Demographic Analysis

Notes:

- 1) Based on summing Census Tract/Block centroids within distance ranges. A portion of actual block may extend beyond distance (overcount), or portions of some blocks may be within distance but centroid is outside (undercount). Usually within 5% in the 1 to 5 mile range.
- 2) The Hispanic Origin category is defined as an ethnic category, not as a race in the official Census definitions. Hispanic Origin may include counts from any of the Census race categories including White. PL171 Census data included a cross tabulation of origin versus race. Our definition for Total People of Color is Total Population - White Origin as tabulated in the PL171 data. The individual race summaries are summarized as originally defined.

Actual Clipped Polygon Analysis of Population

Notes on Analysis:

The populations within specified distance ranges were calculated using the 1990 US Census data. These values were calculated by summing the population for each census block located within each distance range. For census blocks lying only partially within the range, the percent area of the block within the range was multiplied by the population densities of the block.

Distance From Site	Total Population
